PROFESSIONAL SERVICES

Microsoft & Cloud

WHEN SHOULD YOU BE INTERESTED IN OUR SERVICES?

You want to introduce Microsoft Teams or other APPS on Office 365 - or you have just done so - but you lack certain functionality and connections to other systems to make the digital workplace more efficient. Do your users need data from an old system? Are there requirements that new information be stored in Office 365/Sharepoint and be accessible in Teams? Would you like to integrate different products into the Microsoft ecosystem?

SOLUTION

You benefit from the wealth of experience gained from our many years of product development in the Azure environment. We are able to upgrade your digital workplace by combining our years of experience with collaborative solutions (Enterprise Social Networks) - and the corresponding integration know-how - with our knowledge of Azure Cloud implementations. We have developed connectors and interfaces in a wide variety of applications. This serves as the starting point for our work with you and it's one way that we help you generate a positive return on your investment.

BENEFITS

One of the most comprehensive APP applications in the Office 365 market is our SmarterWorkplace Solutions. These products' availability in the Microsoft Marketplace proves that with the help of Azure's modern cloud architecture we can develop large-scale solutions. We make this experience available to you. In addition, we not only have the necessary implementation know-how, but also first-hand experience using these same tools. This helps us optimize your approach to how information should be made available to your team members.

EXAMPLES / USE-CASES:

A video with examples of the APPS we have developed can be found at:
